

Guide to VSCode

Pissed Baguette *

1 Creating a Document

In order to get PDFs and all those other baggage files that come with a bloody LaTeX document, you need to "Build LaTeX project" after going through the normal routine.

2 Compiling the PDF

In order to compile properly, one must:

1. Save the document
2. Re-build the project
3. Refresh all viewers
4. View in VSCode (or other)

*Screw you, Microsoft
